One little Indian (*Motion picture*) National Film Board of Canada, Ottawa, 1954.
16 min., sd., color, 16 mm.
Summary: A puppet film about traffic safety rules, presented through the story of a little Indian boy who pays his first visit to a big city. Even though Magic Bow is endowed with magic gifts, and thrills the video audience with his acts, the whirl of traffic outside the arena leaves him completely bewildered. Only the prompt actions of kindly city folk save him from grievous mishaps; from them he learns some basic safety precautions, and passes them on to his admiring public.

The opening of the West (*Filmstrip*) Life, 1954. Made by Alfred Belok.
61 fr., color, 35 mm.
Eastman color.
With lecture notes.
Based on an article which appeared in Life magazine July 4, 1949.
Summary: Captioned photographs are used in portraying the exploration, settlement, and development of the West during the 19th century. Depicts the primitive civilization of Indians living west of the Mississippi River; portrays the hardships of early fur trappers penetrating unexplored regions and of the emigrant settlers traveling west by wagon train; explains that the discovery of gold in 1849 contributed greatly to the rapid settlement and development of the West. Shows that steamships facilitated inland water transportation and depicts the completion of the first railroad which connected the East and the West.

Our invisible committees (*Motion picture*) National Training Laboratory in Group Development, 1951.
25 min., sd., b&w, 16 mm.
With discussion guide.
Summary: Explores the point of view that one of the most important obstacles to group thought and decision-making is the conflict of social pressures which operate within individuals during a meeting. Presents a case study of a typical group, made up of representatives from various community organizations, holding its initial meeting. Shows that little is being accomplished; by means of animated diagrams, suggests that the individuals are having difficulty because of the conflicting social pressures within them; portrays a fantasy showing what some of these conflicting forces are and how they operate during the meeting.

Our town is the world (*Motion picture*) National Film Board of Canada, Ottawa, 1950.
11 min., sd., b&w, 16 mm. (Canada carries on series)
Summary: Dramatizes the story of friction between two groups in an average Canadian town to reproduce in miniature the problems of national ill-will and rivalry facing the United Nations, and to illustrate the necessity for tolerance between individuals and countries. Youngsters from different sides of town refuse to play together, get into a fight, and wind up at a newspaper office, where the editor points out to the children that the differences between them are not important and that their fight has had only bad results for all. Explaining that the U. N. was set up to prevent such destructive quarrels between nations, he tells them that we must all learn to work together if we are to survive.

Oxidation (*Filmstrip*) Film Strip-of-the-Month Clubs, 1955.
40 fr., color, 35 mm.
Eastman color.
With teaching guide.
Summary: Describes the experiments of Antoine Lavoisier regarding the nature of oxygen and the role of oxygen in combustion. Slow oxidation is illustrated by the burning of carbohydrates in the body and by an experiment which shows the slow oxidation of iron. Rapid oxidation is illustrated by the use of explosives. Experiments are used to show the oxidation of zinc by sulphur and of sodium by chlorine. Explains the application of the electron theory to oxidation. Captioned drawings.

Packaged power (*Motion picture*) Aluminium Limited, Montreal. Made by Crawley Films, 1952.
32 min., sd., color, 16 mm.
Summary: Presents the story of Canadian aluminum production. Bauxite, mined in British Guiana and brought to the smelters at Arvida near the Saguenay River power development, is put through the chemical processes that make it into alumina, and the electric process that makes the alumina into aluminum. Shows large Canadian-produced ingots flattened into strip and sheet in a British continuous-strip rolling mill. Pictures bauxite operations in Jamaica, and presents a preview of the power and smelter project at Kitimat in British Columbia, which involves piping water through the Cascade Mountains to a powerhouse on the edge of the Pacific.

Pakistan: its land and people (*Motion picture*) Edward Levonian. Released by McGraw-Hill Book Co., 1955.
11 reels, sd., b&w, 16 mm. (Lands and their peoples)
Summary: Explains that Pakistan, although divided into two parts, was created in 1947 to unite the Moslem population of India. Discusses the differences and similarities of the citizens of East and West Pakistan, explaining that the people are united by their common hopes and goals. Presents views of West Pakistan where insufficient water and swarms of locusts provide the region with two major agricultural problems. Includes a visit to East Pakistan where the abundant water supply enables the farmers to raise rice for local consumption, and jute, teak, and bamboo for export.
Credits: Directors and photographers, J. Michael Hagopian, Edward Levonian.

Pen point percussion (*Motion picture*) National Film Board of Canada, Ottawa, 1951. Released in the U. S. by International Film Bureau.
7 min., sd., b&w, 16 mm.
French version released under the title A la pointe de la plume.
Summary: Explains the principles and production of synthetic sound, and shows Norman McLaren's experimentation with hand-drawn sounds on film. An oscilloscope records what various sounds look like—the strings of a guitar, the tones of a tuba, the crow of a rooster, and the human speaking voice. Explains how sound vibrations are translated into an area of varying width on a film's sound track. Norman McLaren demonstrates on a moviola the sounds that emit from a soundtrack on which he has drawn dots, lines, and triangles. Shows how these sounds are synchronized with the hand-drawn animations.

Pharmacologic study of Metrazol. Part 1: General description (*Motion picture*) Bilhuber-Knoll Corp., 1948.
17 min., sd., color, 16 mm.
Summary: Demonstrates the physical and pharmacologic properties of Metrazol. Compares the excitant action of Metrazol on the central nervous systems of frogs with that of strychnine both before and after brain transection. Demonstrates in dogs and mice the arousing action under conditions of near or light anesthesia, and shows the change of pattern of electroencephalographic tracing taken during pentobarbital anesthesia.

Pharmacologic study of Metrazol. Part 2: Characterization of depressants (*Motion picture*) Bilhuber-Knoll Corp., 1948.
17 min., sd., color, 16 mm.
Summary: Shows the relative depth and persistence of depression in dogs given paraldehyde, pentothal sodium, and phenobarbital sodium sufficient to produce light surgical anesthesia. Shows the effects of these and other common hypnotics on a depth-recovery time chart, using in a modified form Guedel's signs and stages of anesthesia.

Pharmacologic study of Metrazol. Part 3: Circulatory and respiratory effects (*Motion picture*) Bilhuber-Knoll Corp., 1948.
20 min., sd., color, 16 mm.
Summary: Presents the direct method for measuring changes in heart force under conditions of an intact circulation. Demonstrates with dogs the respiratory effects of Metrazol under conditions in which arousal is not manifest. Pneumographs, recording tambours, and an air volume measuring device show the respiratory effects. Demonstrates the extreme cardiac stimulant action of epinephrine in an isolated, perfused rabbit heart; and illustrates quantitatively the same effect by means of calibrated springs attached to Cushny levers. Synchronous exposures of the dog heart and electrocardiogram recordings show extreme cyanosis, dilation, and rhythm irregularities.

Phasemicroscopy: Normal living blood (*Motion picture*) Dept. of Medical Illustration, School of Medicine, University of Washington. Released by Film Center, University of Washington, 1954.
25 min., sd., b&w with color sequences, 16 mm.
Summary: Compares the various circulating blood cells, including blood platelets and red blood cells, as they appear in a Wright's stained preparation and in the living state when examined with the dark medium contrast phase objectives. Shows living blood leukocytes in various stages of activity from the non-motile state as observed immediately after the preparation is made, to the most active state of motility. Depicts the unaltered blood platelet as well as various stages in its transformation into the vesicular platelet. Demonstrates various phenomena of the red blood cells, such as flickering, stickiness, and plasticity.

Porcelain jacket crown technique (*Motion picture*) U. S. National Bureau of Standards, in cooperation with Council on Dental Research, American Dental Association, and the University of Montevideo, Uruguay, 1955.
24 min., sd., color, 16 mm.
Summary: Describes in detail a simplified method of making fused porcelain jacket crowns. Discusses the use of a prefabricated porcelain veneer made from a stock tooth, and the use of two porcelains having widely different fusion temperatures. Explains that in this technique fusion shrinkage has been greatly reduced and the number of fusions has been cut from the customary four or five to two.

Precisely so (*Motion picture*) General Motors Corp., 1940. Made by Jam Handy Organization.
18 min., sd., b&w, 16 mm.
Summary: Explains that the standards of precision manufacturing have made it necessary to develop delicate instruments of measurement, capable of dividing an inch or an ounce into thousands of parts. Traces the development of modern standards of accurate measurements, beginning with the crude instruments of the ancients. Shows scientific instruments that measure time to the thousandth part of a second, gauge the weight of a pencil dot on a piece of paper, and split a hair's breadth measurement into hundreds of parts.

Preparing your child for medical and dental care (*Filmstrip*) Mental Health Division, Canada Dept. of National Health and Welfare, Ottawa. Made and released by National Film Board of Canada, Ottawa, 1954.
37 fr., color, 35 mm. (Child training series)
With manual.
Summary: Shows how fears about the dentist, the doctor, or the hospital can unwittingly be planted in a child's mind through careless or exaggerated accounts of surgical or dental treatment; parents' failing to offset hearsay about doctors and hospitals, or employing bribery to coax a child to the doctor or dentist. Outlines ways in which such fears can be prevented. Shows how a confident understanding can be built up in the child by routine visits to doctor and dentist from early childhood, by straightforward explanations about medicines, illnesses, health services, hospitalization; by a calm, unemotional attitude on the part of parents in the case of a child's own accident or illness; by encouragement of play activities through which the child becomes familiar with medical procedures; and by frank and truthful preparation for hospitalization.
Credits: Director, J. Licastro; consultant, C. A. Roberts; script, J. K. Rooke; artwork, J. Simpkins.

16 min., sd., b&w, 16 mm. (Teacher education series. Set no. 2)
Correlated with the book Student teaching, by Raleigh Schorling and Howard T. Batchelder.
Summary: After gathering information to solve the pressure-group problem, the students in a social studies class suggest possible solutions to the problem and, with the help of their teacher, develop a set of criteria against which the hypotheses can be tested. Follows the thinking process involved in testing each hypothesis and in arriving at a solution to the problem. Emphasizes the importance of the use of the problem method in preparing students for democratic living.

Problem-solving in infants (*Motion picture*) Columbia University; made 1942. Released by International Film Bureau.
20 min., si., b&w, 16 mm. (Child development series)
Summary: Illustrates how the problem-solving process and the development of intelligent behavior are analyzed in a child study laboratory. Shows how children of different ages and temperaments attack the problem of obtaining a desired object which is seen through but obstructed by a glass plate. Points out that perception, motivation, and motor ability enter into the situation and must be evaluated before performance ability can be rated. Shows how children of different ages learn the principle by using rakes to obtain food out of reach outside of the cage in which they are placed.

Progressive waves: transverse and longitudinal (*Motion picture*) McGraw-Hill Book Co., 1953. Made by Audio Productions.
9 min., sd., b&w, 16 mm. (College physics series)
Produced in collaboration with the Visual Aids Committee of the American Association of Physics Teachers.
Summary: Introduces the subject of transverse progressive waves by illustrating a pulse being sent down a stretched rope. Shows its velocity of travel to be dependent upon the elastic and inertial factors. Employs a stretched string to show steady wave train propagation, and identifies and relates wave length and frequency. Longitudinal wave disturbance is shown by a pulse moving down a row of beads connected by light-weight springs. Animated drawings.

The public's business (*Motion picture*) National Film Board of Canada, Ottawa, 1955.
6 min., sd., b&w, 16 mm. (What do you think? No. 7)
Summary: Poses the question of whether a person in public office can legitimately use his position for private gain. When a committee of high school students is planning the refreshments for a forthcoming sports day, one boy, who is employed part-time by a caterer, persuades them to engage his boss to provide the food. Later he brags to a friend that he stands to profit on the arrangement, and his friend objects on ethical grounds. The audience is invited to take over discussion of the issue.

The rabbit (*Motion picture*) British Council, London. Made by G. B. Instructional. Released in the U. S. by International Film Bureau, 1950.
11 min., sd., b&w, 16 mm.
Revised and re-recorded by International Film Bureau, for American distribution, from the film released in England under the title The life of the rabbit.
Summary: Presents the rabbit as an example of study within the rodent family and within the larger classification of mammals and vertebrates. Describes the food, skeletal structure, natural habitat and burrow of the rabbit, and explains that its characteristic movements and bodily parts are related to its environment. Through animated drawings shows the fresh burrow dug for each new litter, the process of reproduction which takes thirty days to the births, the care which the female takes of the young, and their development as they learn to fend for themselves.

Radiation—silent servant of mankind (*Motion picture*) Handel Film Corp., 1955.
13 min., sd., b&w, 16 mm. (The magic of the atom, no. 21)
Produced with the technical assistance of the U. S. Atomic Energy Commission and the Atomic Energy Project at U. C. L. A.
Summary: Depicts four examples of the use of controlled radiation—a cobalt source at Brookhaven, which bombards plants to facilitate research that may lead to better strains of food crops; an atom smasher which directs a beam of sub-atomic particles against a test animal to aid in the therapy of deep-seated tumors; radioactive iodine which is used on a patient at the Brookhaven Center Research Hospital as a treatment for cancer of the thyroid; and the medical research reactor at U. C. L. A., which may be effective in treating brain tumors.

Radical resection of the maxilla and orbit with early prosthetic restoration (*Motion picture*) U. S. Veterans Administration, 1955.
19 min., sd., color, 16 mm.
Summary: Demonstrates in a patient with a carcinoma of the maxillary sinus, a surgical technique for radical resection of the superior maxilla. Shows a Weber-Fergusson type of incision, elevating the cheek in a single flap. Explains that because of tumor extension, the eye and orbit are exenterated. After removal of the maxilla, the cheek flap is lined with a split thickness skin graft to hasten healing. One week postoperatively, a temporary acrylic obturator is inserted to allow restoration of phonation and deglutition. Shows details of the final upper denture prosthesis with obturator attachment, and demonstrates the result after three years.

Raising broilers in Caroline County, Maryland (*Filmstrip*) Caroline County Board of Education in cooperation with the Maryland State Dept. of Education, 1955. Made by Photo Lab.
35 fr., color, 35 mm.
Anaco color.
With script.
Summary: Photographs are used in showing how broiler chickens are raised and prepared for market in Caroline County, Md. Shows eggs being graded, being placed in incubators, going through a candling process, and hatching into chicks. Compares outmoded brooder houses with modern types where chickens are provided with clean, well-ventilated quarters, vaccinated against disease, and fed special food. Shows the various operations in a dressing plant where the chickens are killed, picked, weighed, graded, chilled, and packed for shipment.

Recent modifications of convulsive shock therapy (*Motion picture*) A. E. Bennett and Paul T. Cash, 1941. Released by Psychological Cinema Register, Pennsylvania State University.
20 min., sl., color, 16 mm.
Summary: Shows the use of curare and quinine methochloride in protecting patients from spinal fractures in metrazol and electrical convulsion therapies. A young woman in extreme manic excitement is pictured before treatment. Shows the preparation and administration of curare before the metrazol injection. A soft convulsion follows. After a series of eight treatments the patient presents normal behavior with every indication of complete recovery. Other patients are shown, with the use of quinine methochloride before the administration of both metrazol and electrical shock convulsions. Presents the technique of electrical methods. An X-ray photograph gives an example of a fracture which occurred when older methods were used. Compares the reaction with and without the use of curare and quinine methochloride. For medical profession and allied groups.

Regional contrasts in southwest Germany (*Filmstrip*) American Geographical Society. Made and released by Herbert E. Budek Co., 1954.
39 fr., color, 35 mm.
With manual.
Summary: Shows how differences in the physical environment of southwest Germany produce variations in land use—cultivated fields of varying size and productivity on the floor of the Rhine Valley, rolling hills of Kraichgau, the plateau of the Swabian Alps, and forests on the mountain slopes of the Odenwald and the Swabian Alps. Discusses various agricultural practices and describes a typical farm unit. Indicates factors affecting location of villages, type of industry, and relative prosperity, and emphasizes the effect of different cultural and economic heritages upon both farm and town inhabitants.

The repair of femoral hernia (*Motion picture*) U. S. Veterans Administration, 1956.
14 min., sd., color, 16 mm.
Summary: Explains that high ligation of the peritoneal sac is one of the fundamental principles of sound hernia repair; that when repairing femoral hernia by the inguinal approach, high ligation can best be accomplished by first opening the small peritoneal diverticulum always present at the internal ring and then mobilizing the entire sac into this area lateral to the deep inferior epigastric vessel; that this maneuver facilitates the separation of properitoneal fat from the hernia sac and insures a clean, high ligation; that repair is then accomplished by approximating the transversalis fascia to Cooper's ligament and laterally to the femoral sheath; and that closure of the femoral ring by suturing the medial end of the inguinal ligament to the pectineal fascia may or may not be done in individual cases.

Role of the hypothalamus in emotion and behavior (*Motion picture*) Jules H. Masserman, 1943. Released by Psychological Cinema Register, Pennsylvania State University.
27 min., si., b&w, 16 mm.
Summary: Illustrates the aseptic Horsley-Clarke technique for inserting electrodes into the hypothalamus of rats, and an automatic conditioning apparatus. Stimulation of the hypothalamus in recovery animals induces dramatic motor and sympathetic manifestations of sham rage, but behavior is uninterrupted, unadaptive, and stimulus-bound. Environmental stimuli, associated as many as 480 times with sham rage reactions, fail to induce affective states. In contrast, recovery animals exciting feeding, or other adaptive behavior, during stimulation, and show normal fear and rage despite extensive hypothalamic lesions. Explains that cardiac and vasomotor accompaniments of hypothalamic conditioning are not produced in anesthetized animals (technique and tracing illustrated). Concludes that hypothalamus may integrate efferent pathways of affective expression, but that it does not serve as a source of drive or as a center of emotion.
